

Session 1: Start your competition boat!

Over the three sessions, we are going to make boats to race! Today, you need to make the main part of your boat - the hull.

You will need:

- A plastic container - ideally something like a margarine tub / juice carton (with one side cut off)
- Waterproof decorations - tin foil / foam shapes / wax crayons on paper (then covered in tape) / cut up crisp and biscuit packets etc for colourful stripes / bottle tops for portholes
- Tape / glue
- Scissors

Instructions:

Gather your bits and pieces together, and have fun creating the hull of your competition boat. Will it be big, small, long or short? How many portholes will you add? What shape will make the boat good at floating / sailing fast? What eye-catching designs will you add to make your boat stand out?
